CBN – 0.97 – 1.07 %

D9-THC – 0.15 %

Total Cannabinoids – 94%+

Total Minor Cannabinoids – 2.2 – 2.4%

Product description:

-Product may be crystalized due to high concentration of CBD and minor cannabinoids.

-Product can be warmed for ease of transfer from vessel and to aid in dissolution into diluents (i.e. MCT, VG, etc.). Heat entire container in an oven or water/bead bath at 75-85°C (165-185°F) until fully melted and flowing oil consistency. Depending on storage temperature and size of packaging, this can take several hours. Using water or bead bath is the quicker option.

-Use care to not heat above 95°C (200°F). This can cause a slight darkening of the product and possibly cause degradation of cannabinoids.

-Store in cool dark location. For long term storage (>3 months) refrigerate or freeze product.
